

*ILMA's knives for packaging machines are all manufactured based on your drawing or sample; there can be no catalogue that represents them, precisely because of the different types and diversity of measures.*

*We have always been supporters of "Made in Italy" and we produce everything within the company, with certified and first-rate steels, purchased directly from our German steel mill, our partner for over 25 years.*

*For this reason, we always have in stock steels in the most diverse types, from the light alloy to the cold-processing steels, from AISI 420 to rapid and high-rapid steels, all with thicknesses ranging from 1 to 10 mm.*

*We provide the customers with our many years of experience in the world of steel offering real solutions to the most varied cutting issues. The thermal treatment performed internally by our company, allows us to give added value par excellence, to our products.*

*Ours is today one of the leading companies in the production of knives for packaging machines, thanks to the high quality standards, the production flexibility and the dynamic organization that today the market asks for.*

*Send us your request; you will find our Sales Department at your complete disposal for any need.*
